

# QUICKALINE ALIGNMENT KIT

**STANDARD KIT**

**MINI KIT**

**A perfect solution  
on alignment problems**

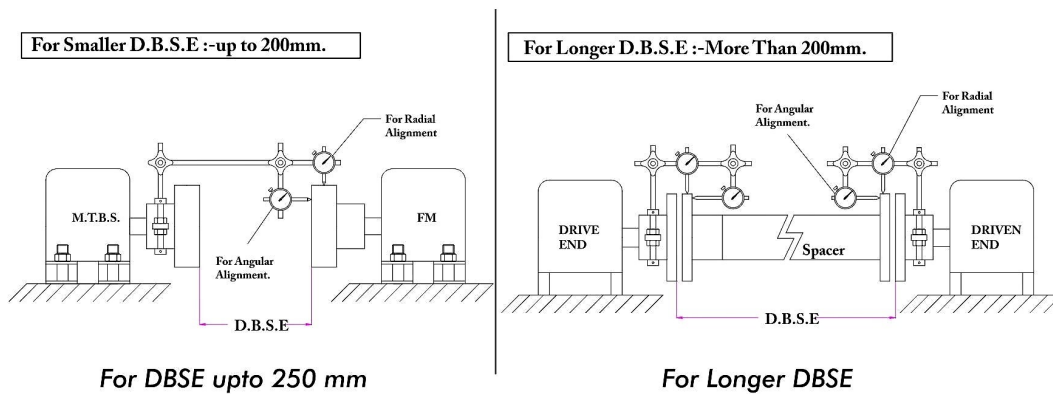

### Why we need it.....?

Alignment of rotating machinery has always been considered to be an unpredictable task because of unavailability of proper measuring devices. We have to waste lot of money in the form of plant & machinery's down time. To give an absolute solution to alignment problems, we have developed '**Quickaline Alignment Kit**' which helps to complete the alignment of drive & driven equipment precisely within short period of time.

### Specifications

This kit covers to carry out alignment of

- Shaft diameter from 25mm to 250mm.
- Distance between shafts ends (DBSE) upto 250mm by using single set (i.e. 2 Nos.) of dial gauge.
- For longer DBSE by using two set of dial gauges.

### Accessories

Quickline Alignment Kit consists of aluminium clamps, precisely grounded steel rods, clamping knobs, dial gauges, stands & nuts, right angle for visual alignment, measuring tape, view mirror, water level indicator etc. are provided in well furnished box.

### Alignment Procedure

We are providing procedure for alignment by using **Quickaline Alignment Kit**. This procedure is given along with Kit Box.

- In view of our constant efforts to improve our product for customers requirements we reserve the right to change specification without prior notice.
